Annotated bibliography of print resources on documenting research (lab notebooks).

   Pages 89-99 give a detailed description of how to keep a good lab notebook and why you should do so.

   A two-part case study on the consequences of a collaborator keeping a poorly updated laboratory notebook and accusations of data misrepresentation and falsification. This case is fairly long, but illustrates why you and anyone you work with should keep consistently complete notes. This text, and other volumes from the series, may be ordered directly from Indiana University at http://www.indiana.edu/~appe/cases.html.

- For an in-class activity, show examples of documentation from a real lab notebook (with identifying details blacked out) and discuss what items are good or bad from each example.
